OBJECTIVE AND DESCRIPTION

This project provides for the paving of the Aroclor Department truck and tank car loading areas and for the installation of a catch basin to effectively remove insoluble Aroclors from the department effluent. It will be accomplished by the installation of paving in areas where spills, leaks, etc., can occur. Collection trenches and sewers will connect loading areas to a settling basin of sufficient size to permit primary separation of any entrained Aroclors. A new sewer line will connect the catch basin to the plant sewer system.

JUSTIFICATION

The project is necessary to provide environmental control. It covers primary actions recommended by W. B. Papageorge in his memorandum to B. W. Corlew, dated July 13, 1970.

ALTERNATE COURSES

No other effective alternate course is known.

STATUS OF PROJECT

Preliminary engineering is complete. Detailed engineering can be completed within six weeks after approval.

RECOMMENDATIONS

Project approval is recommended.
